# Industrial Ethernet Cable Tester

## MicroScanner<sup>™</sup> PoE

#### Key features:

- Distance (feet or meters) to fault or cable end
- Works on cables with RJ45 connectors
- Supports EtherNet/IP, PROFINET, ModBus TCP, and other protocols
- Simple to use Connect cable and press green button
- Graphic display to see the exact problem
- Built-in tone generator to trace cables
- Identifies PoE power that the switch will provide
- Small enough to fit in your tool bag
- Backlit display for dark locations

## Solve the most common Industrial Ethernet cable problems in **4 seconds**.

#### Cable Faults Diagnosed

- a) Open on any wires or shield
- b) Shorts between 2 or more wires
- c) Crossed wires
- d) Crossed pairs
- e) Split pairs that cause cross talk
- f) View individual pairs for distance to fault
- g) Identify inactive and active device and its Ethernet speed

a) Open on wire 4 shield

b) Wires 6 and 5 shorted

c) Wires 3 and 4 crossed

d) Wires 1-2 and 3-6 crossed

e) Split pairs

f) One pair view with distance to short

g) Active switch, 1000 Megabits/sec

## **Industrial Ethernet Cable Tester**

## Connections for channel tests with two RJ45 connectors.
